(54) Title: WIRELESS CONTROL FOR CREATION OF, AND COMMAND RESPONSE TO, STANDARD FREIGHT SHIP-MENT MESSAGES

(57) Abstract: A freight management arrangement includes a monitor system that communicates over wireless with a large number of freight assets by land and with smaller number of users each associated with a fleet of the freight assets. The monitor system polls sensed ambient data in the freight assets on the basis of requests from the users. The requests may be stored as data in the monitor system or occur on a real-time basis.
